

Abdul Moiz Sheikh

Lahore, Pakistan · +92 314 7627917 · abdulmoizsheikhh@gmail.com · github.com/MoizSheikh · linkedin.com/in/moizsheikhh

Software Engineer — React / TypeScript. 4 years building consumer-scale web products, including tech-leading a 6-engineer team on Dubizzle Group's central CRM and driving its React 16→18 migration. Full-stack in current role (Python/FastAPI services alongside frontend). 13 months prior experience working remotely with a US team.

EXPERIENCE

Laam — Full Stack Engineer

Dec 2025 – Present · Lahore

- Bootstrapped ads.laam.com (live) end-to-end — a new self-serve platform opening Laam to external advertisers — auth, role guards, service infrastructure (IAC), admin UI, and dashboards.
- Built the ads monetization stack: promos system (CRUD/revoke APIs, promo ledger, bonus impressions, schedulers, pub/sub) and the full campaign lifecycle — prepaid/postpaid billing, auto-invoicing, payment-proof verification queue, payment ledger with scheduled jobs.
- Rebuilt Reviews & Ratings from a single denormalized table into a full system — reviews/interactions/log schema, brand and product ratings (service, migrations, live backfill, Elasticsearch indexing), collection via email, notifications, and order page; review coverage grew 19% → 28% in one month.
- Extended search ranking with review signals — reward/demote bands by rating and review volume.
- Led the partners-app migration onto the design system — unified mobile/desktop files into responsive components; built CMS localization and page versioning.
- Closed ~50 on-call tickets in 3 months across frontend and backend, including a solo on-call week; own delivery through production including infrastructure-as-code deploy PRs.

Dubizzlelabs (Bayut & OLX) — Software Engineer

Jul 2023 – Dec 2025 · Lahore

- Tech lead for a 6-engineer sub-team on Jarvis, Dubizzle Group's central CRM — ran sprints, code reviews, and architecture calls, reporting into the platform lead.
- Led Jarvis's migration from the legacy Webpack toolchain to Vite + React 18 — lazy loading, Suspense, and React Query caching.
- Built backend features on Jarvis's Python/FastAPI services, including single-schema multi-tenancy — tenant scoping as a dependency with SQLAlchemy-level tenant injection.
- Owned the frontend across the CRM and its sub-apps, supporting 15+ country-specific configurations — drove the move from per-tenant conditionals to config-driven rendering behind a feature-flag hook.
- Designed the CRM's i18n contract: backend emits machine codes + params, frontend translates through a key-based t() layer — adding a language touches zero backend code; migrated translatable content to a per-language JSONB column.
- Built the frontend for Arabic-language search in MENA markets — RTL layout, Arabic input and results handling; delivered tenant onboarding for the KSA market launch.

Lyftrondata — Software Engineer (Frontend)

Jun 2022 – Jul 2023 · Virginia, USA (remote)

- Built the frontend of a data-integration platform — the configuration UI through which 50+ ETL connectors are set up, cutting pipeline creation to under 5 minutes.
- Built the data-catalog module (UI plus dynamic row/column permission logic) and added IndexedDB caching to the platform's data-fetch layer.
- Refactored legacy frontend code to cut duplication; onboarded and mentored 4 new engineers.

PROJECTS

- alignwithme.com — personalized user guides with real-time collaboration and OpenAI-powered chat. Built and shipped solo; live.
- hoopwrlld.com — personalized basketball assessments. Built and shipped solo; live.

SKILLS

Core: React · Next.js (App Router, server actions) · TypeScript · JavaScript · Design systems · SSR / e-commerce frontend · Python + FastAPI · Node.js

Also: Redux · React Query · Tailwind · Radix/shadcn · zod · react-hook-form · REST · WebSockets · SQLAlchemy · i18next · frontend performance (Core Web Vitals, Lighthouse, code splitting)

Data: PostgreSQL · MySQL · MongoDB · Redis · Elasticsearch (indexing) **Infra:** Docker · GitHub Actions · Terraform · AWS (S3, EC2, ECS, RDS, Lambda) · GCP · Sentry

EDUCATION

BS Information Technology — PUCIT, Lahore · CGPA 3.32
